## INTRODUCTION

This is the second of the Series published by the Coconut Information Centre funded by the International Development Research Centre (IDRC) Canada on major subject areas to clear the information gap that exists from the period 1900-1965.

In our attempts to have a comprehensive coverage we have consulted the Bibliography of literature on the coconut palm by W.V.D. Peiris covering up to the end of 1935, Annotated Bibliography of coconut in India 1936-1976, Plant Breeding Abstracts, Technical Index of the Tropical Products Institute and a few published text books on the coconut palm.

The arrangement is by main subject areas with bibliographic details for articles, viz. author, title, year of publication, volume, number, pagination, illustrations and number of references.

A detailed subject index is provided with necessary cross references where subjects overlap. Author index and a geographical index is also provided.

Abbreviations for the Journals cited in the text are listed at the beginning with their full titles. Some of these abbreviations may not be the standard ones. We are very grateful to the FAO Library for checking some of the abbreviations and providing us with full titles, that we could not find in the standard reference tools.

Requests for copies of articles listed in these Series can be provided from our own resources or from outside sources.

I wish to record my appreciation to the staff who worked so willingly to make this service a success.
